

SWIVELIER

29984 RIGHT ANGLE MEDIUM BASE SOCKET ADAPTER - Medium to Medium 90° Elbow

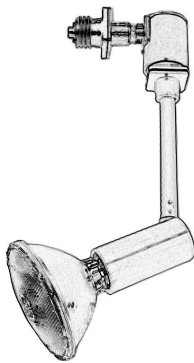

Converts a horizontal facing medium base socket for use with Swivelier Extenders.

Use an Elbow in a recessed fixture with a side mounted, horizontal facing medium base socket. With a 90° Elbow, you can screw in an Extender so that the Extender stem is mounted vertically. When used with chandeliers that have an upward facing medium base socket, use two Elbows, creating a 180° bend. Then screw in an Extender so the Extender mounts vertically. Elbow has built-in ratchet mechanism that permits adjustment of the Elbow socket for proper alignment.

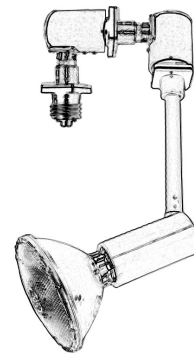

To install:

- Turn recessed fixture power off.
- Unscrew lamp after allowing lamp to cool.
- Screw the 29984 elbow into the side mounted socket.
- Elbow is provided with a ratchet mechanism to prevent over tightening when elbow is screwed in all the way.
- Continue to rotate the 29984 socket clockwise until it faces downward.
- Install Extender by screwing into the 29984 socket.

Socket sideways

Use One 29984

Socket face up

Use Two 29984
